

Burroughs B90 Series
The B92

The step into a new level of computer excellence: Burroughs B92. An easy to use, flexible system with power which responds to your requirements. It's a step up to greater cost effectiveness. A step supported by a company with over 90 years experience in information management.

A step above other systems in this size and price range.

Burroughs B92 is part of our B90 series of small computers. For many organizations, it's a first step into computerized operations. For many others, it's a move up to higher levels of computer performance. For small systems users it's a wise action to take, simply because the B92 is easy to use, powerful, and has the modularity to handle

your future needs.

... Which makes the B92 entirely responsive: when delivered, your system has the memory, peripherals and application solutions your organization requires. The range of proven system components is so comprehensive that your Burroughs representative will configure a B92 system precisely to your needs. And you can add hardware and software modules when you need them in the future.

Burroughs provides the simplest approach to computer implementation by offering everything it requires. You take a single step and move up to the best system for your organization: Burroughs B92.

Take The Step Up

Getting In Step: Computer Management System (CMS). When a computer system is easy to work with, it is readily integrated into your operations and rapidly begins to produce results.

The B92 is "friendly" to use. Through Burroughs operating software—CMS—the B92 works with the operator, providing guidance and automatically controlling those computer functions which otherwise require operator involvement. A major element of CMS—the Master Control Program—automatically assumes such functions as utilizing available memory, selecting necessary peripherals and assigning system components and files on a job priority basis.

The Master Control Program also allows the B92 to be entirely responsive to your work schedules. For instance, during your working day you frequently need to simultaneously handle more than one type of activity such as entering cash receipts while you're printing invoices. The B92 lets you do this through a capability known as *Dynamic Multiprogramming*: you schedule your work to your convenience and the B92 organizes itself to meet your requirements.

Staying In Step. As your organization grows, CMS keeps your B92 in step. Growth is both easy and economical. For instance, disk storage and peripherals

Getting And Staying

can be added to the B92 without reprogramming; the Master Control Program recognizes these changes and automatically incorporates them into the system resources. And CMS continues to facilitate growth into larger Burroughs systems.

Getting In Step: Application Solutions. The B92 is exceptionally responsive to your particular application needs. A responsiveness which is due, in large part, to Burroughs Business Management Systems (BMS® program products), which deliver solutions directly to your operation's problem areas.

There is a selection of application solutions for such

diverse organizations as:

- **Manufacturers**
- **Utilities**
- **Financial Institutions**
- **Educational Institutions**
- **Health Care**
- **Contractors**
- **Distributors**
- **Wholesalers**
- **Government**

These application solutions are designed to coordinate the major management reporting functions of your organization—from income and expense to complete financial statements on demand. For example, there are commercial application modules which take care of such jobs as invoicing, accounts payable, inventory control, inventory management, accounts receivable, payroll and general ledger. You may use only one of these modules, or any number and combination of them, to gain greater control over present activities and to better plan future operations.

Quite simply, Burroughs application solutions allow you to manage more effectively. These low-cost modules—proven worldwide and ready for your use—have an immediate and positive impact on your organization and provide a strong return on your investment.

Staying In Step. You can add application solutions as your needs demand. The B92's software capabilities are, therefore, always in step with your workload.

Getting In Step: Advanced Technology. Burroughs Super Mini-Disk II has three times the capacity of other media in its price range. This low-cost, easy to store disk means greater efficiency, faster throughput and more disk capacity for your money than ever before. It's another Burroughs first for the small systems user.

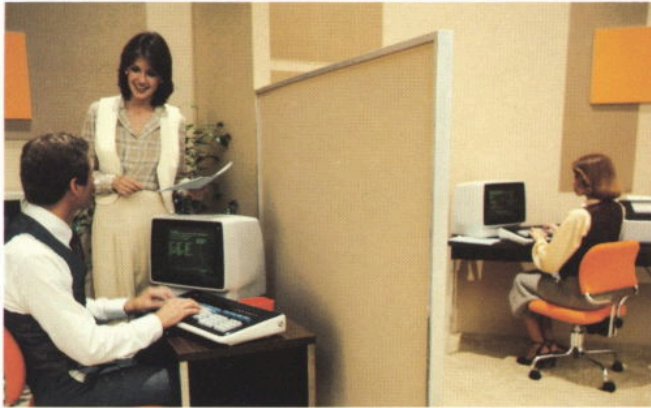

This very small computer also has complete data communications capabilities: your staff can use the computer without leaving their desks, and you are able to get the results you need at remote locations. For instance, while your sales manager is checking inventory status for a customer who is on the phone, your branch offices can verify orders on terminals placed in their locations. The B92 provides a complete sharing of resources—hence, a more effective use of the computer's capabilities.

It's dependable, too. Burroughs has equipped the B92 with on-board diagnostics. The system runs a series of Maintenance Test Routines to detect trouble before it occurs. The B92 gets and stays in step—with the added assurance of greater system reliability.

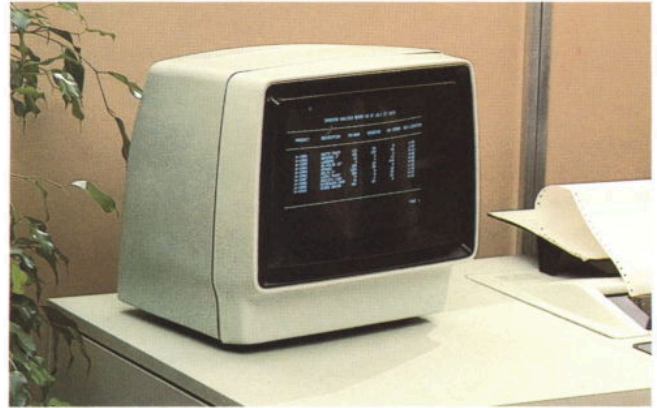

In Step—With You

Terminal stations provide computer power where needed, whether it's at your main office or remote locations. Burroughs Modular Terminals allow data input and inquiries from your various departments for a complete utilization of the B 92's capabilities.

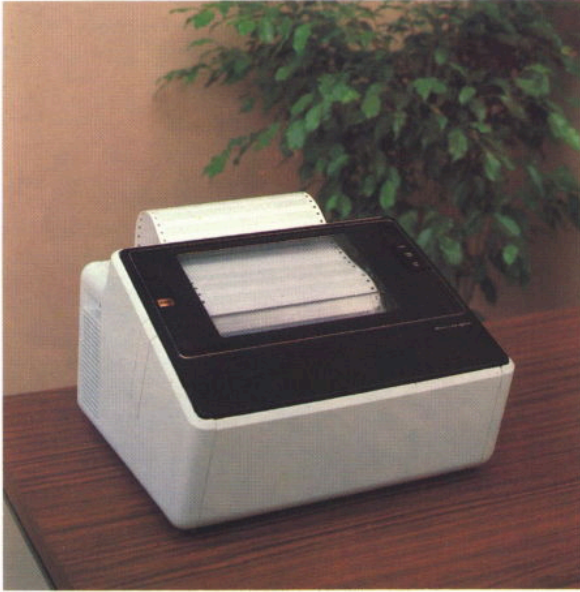

Depending on your requirements, the B 92 may be provided with or without a *console display*. The screen shows instructions, messages, inquiries and data input in bright, easy-to-read letters and numerals, with a capability of displaying 256 or 1,920 characters.

The Essentials Of

Disk storage subsystems are available to meet your particular needs. Shown from left to right are Burroughs Super Mini-Disk II, cartridge disk, Super Mini-Disk and fixed disk. Your Burroughs representative

A selection of *printers* are available to meet a variety of requirements. Shown below are two of Burroughs line printers which accommodate the demands of a heavy workload. Also shown is our terminal printer, which may be used with Burroughs terminal displays, or by itself at remote locations.

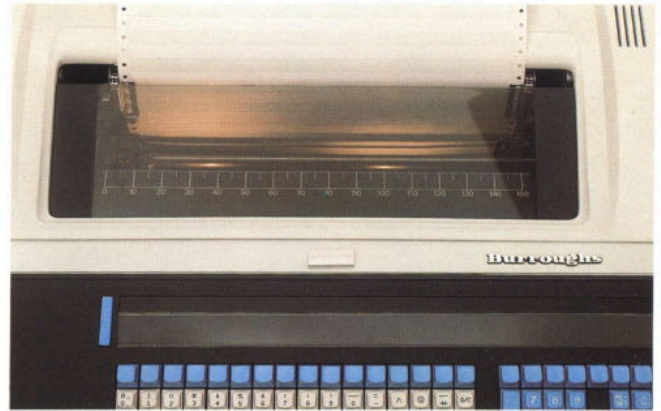

A Successful Step

The *keyboard* is operator-oriented—so easy to use that members of your staff rapidly become productive. Featured is the standard alphanumeric keyboard; indicator lights which guide the operator through the programs; and 24 program select keys which further simplify use.

The *inbuilt printer* produces forms at a rate of 120 characters per second. This bi-directional matrix printer operates with a 15.5-inch wide pinfeed forms handler for greater flexibility.

A Successful Step

will fit the best combination of these subsystems to your requirements, providing expandable power—from two to 47 million bytes—which grows with your needs.

The single-most important element of a successful installation is *people*. People who have the know-how and ability to provide you a system which fits your organization. Who know how to put the best system together to meet your application needs effectively and economically. Our worldwide marketing staff of nearly 30,000 representatives have been trained to assist you in taking the best step for your organization.

And once you've taken the step, you'll have

our support. People who can train your people in system use. People who will service your system if necessary. People who back the B92 to ensure continuous and optimum system performance.

These people are Burroughs people—and they work for you. You take the step up when you go with a company which has the people *and* the products a successful installation requires. Burroughs has them.

The next step is yours.
