NOTES: * FOR ALL HARNESS AND CABLE CONNECTIONS SEE HARNESS OR CABLE CHARTS ON SHEET 3.

1. ATTACH CABLE TIES(ITEM 20) APPOX. 8" APART EXCEPT WHERE SHOWN.
2. ITEM *16 OCCUPIES SLOTS 22, 23 & 24.
3. MODULE M 3001 ITEM *19 IS LOCATED IN RH20 LOGIC ASSY SLOT *19
   MODULE M 3002 ITEM *17 IS LOCATED IN SLOT * 20
   MODULE M 3003 ITEM *18 IS LOCATED IN SLOT * 21
4. PLACE ITEM *37 (DECAL, AIR FLOW) ON POWER CONTROLLER * 863 NEXT TO AIR FLOW CPU L.E.D.
5. CONNECT TO ANY AVAILABLE SWITCHED OUTLET.
6. CONNECT POINTS 11 & 12 FROM ITEM *3, 9 PIN MATE-N-LOCK, TO AVAILABLE POSITION 1&2, OR 3&4, OR 5&6, OR 7&8 (19-30 VAC).
7. P2 ON ITEM *30 (HARNESS, VANE SWITCH) CONNECTS WITH EXISTING VANE SWITCH CONNECTOR. SEE VIEW D-D ON SHEET 2 OF 3. NOT USED WHEN CI20 IS INSTALLED.
8. J1 ON ITEM *30 (HARNESS, VANE SWITCH) CONNECTS WITH EXISTING CONNECTOR P4. SEE VIEW D-D ON SHEET 2 OF 3.
9. ITEM *39 (SUPPORT, CABLE) NOT USED IF SYSTEM IS EQUIPPED WITH A MA20 CORE MEMORY.
10. SWITCH POSITIONS ON VOLTAGE MONITOR BOARD: SWITCH *1 - ON
    SWITCH *2 - OFF
    SWITCH *3 - OFF
    SWITCH *4 - OFF

1.0 OVERVIEW

This describes the installation of the NIA20 Network Interconnect Adapter in a KL10-E system. Figures 3-1 and 3-2 show the NIA20 installed in a KL10-E, rear and front views, respectively. Table 3-1 itemizes the NIA20 parts and Table 3-2 lists the harness and cable connections used in the NIA20/KL10-E installation.

The NIA20 installation uses assigned slots in RH20 Logic Assembly positions 4 and 5, with RH20 positions 6 and 7 reserved for installation of a CI20 Computer Interconnect. A system containing an NIA20 is limited to a maximum of four RH20s. In the installation of an NIA20, a module blank assembly, DEC part number 7019266-00, is used to prevent plugging any other module into RH20 position 4 as described in subsection 3.4.3, instruction 7 (see Figure 3-3).

NOTE

The prior or subsequent installation of a CI20 Computer Interconnect with an NIA20 requires minor deviations in the following procedures and will be described herein when applicable.

Installation of the NIA20 in an existing system requires implementing the following procedures:

1. Unpacking and checkout of installation kit
2. Pre-installation checkout
3. Backplane wire adds
4. Installation of port modules
5. Installation of power supply regulator
6. Installation of NIA card cage
7. Installation of NIA current limiter
8. Installation of DC power harness
9. Installation of vane switch harness
10. Installation of DC voltage monitor harness and module
11. Installation of PLI bus
12. Installation of fan ac cable and power cord
13. Installation of internal NIA cable
14. Installation of KL10 Adapter Board and Blank Module Assembly
15. Checkout

The following subsections provide detailed instructions for performing each of the above installation procedures.

2.0 UNPACKING AND CHECKOUT

Before unpacking any equipment, move all boxes into the computer area. Check the shipment against the packing list to be sure that all boxes were sent. If any boxes are missing, contact the customer and the branch field service manager. Check that all boxes are sealed, and there is no sign of external damage, such as dents, holes, or damaged corners.

If any boxes are open or damaged, document it on the installation or field service report and inform the customer. Open the boxes one at a time, starting with the box marked "READ ME FIRST" and find the packing slip. Check the contents of the box against the packing slip and examine each item for damage. Note missing or damaged items on the installation report or field service report.

This completes the unpacking and checkout phase. Advise the branch field service manager of any problems during this phase. If any items are damaged, the branch field service manager may want the customer to file an insurance claim. For missing items, the branch field service manager should get a short-ship request.

3.0 EQUIPMENT NEEDED FOR INSTALLATION AND CHECKOUT

The following equipment is required for installation and checkout of the NIA20:

1. wire wrap tool (or wire wrap gun), No. 30 AWG, DEC part No. 29-18301
2. wire unwrapping tool, No. 30 AWG, DEC part No. 29-13513
3. Regular Phillips screwdriver
4. Tektronix 475 oscilloscope or equivalent (100 MHz)
5. KLAD pack
6. scope, digital voltmeter
7. H4080 Ethernet Loopback Connector

4.0 INSTALLATION PROCEDURE

4.1 Pre-Installation Checkout

Before performing the installation, verify that the presently configured system is operating properly to preclude the possibility of current system problems being ascribed to the NIA20 after its installation.

1. Remove all customer media, to minimize the possibility of corrupting customer data.
2. Mount the supplied KLAD pack, bring up the diagnostic monitor, and run the "B" string to verify that the system is working properly.
3. Power-down the system.
4. Verify that the system has a M8532-YA board installed. If not, replace the currently installed M8532 with a M8532-YA.
5. RH20 positions 4, and 5 will be used for the NIA20. If there is an RH20 in position 4, remove it. If there an RH20 in position 5, leave it temporarily installed and perform diagnostic DFRHB to verify the reliability of the backplane wiring. If there is no RH20 in position 5, relocate a module from one of the other RH20 positions to position 5.
6. Power-up the system and run diagnostic DFRHB. This verifies that the backplane wiring of RH20 position 5 is functional. Power-down the system and reinstall the RH20 in its original position.
7. Perform diagnostic DFRHB also in RH20 position 7 to verify the reliability of existing backplane wiring in RH20 positions 6 and 7, before implementing any NIA20 modifications.
8. Power-down the system and reinstall the RH20 in its original position.

4.2 Backplane Wire Adds

For the installation of the NIA20, twenty-four new wires must be added to RH20 backplane positions 4 and 5. An examination of the RH20 backplane must be performed to confirm the physical addition of the wire wraps listed in Table 3-3. A CHECK column is included in the table for the wire installer to record installation progress.

To prepare the wire adds, strip approximately 1 inch of insulation from the wire to allow sufficient turns to be made on the wire wrap post. After each wire is added, enter a check in the blank space adjacent to the wire listing in Table 3-3.

To assure the reliability of the new wiring, an ohmmeter check of each new wire add should be performed by a person other than the wire installer.

Table 3-3. NIA20 in KL10-E Wire Adds

4.3 Installation Of Port Modules

Protective backing is placed on the lower third non-component side of each port module and the upper third of the non-component side of the M3002. As the modules are inserted and/or removed, the protective backing protects the Mbus and PLI bus cables. Note that the protective backing should not interfere with the card guide or cover the gold finger contacts on the module. Insert the port modules as follows:

1. Connect MBus cable, DEC part number 7019270-1J. Be sure to orient the cable so that the flat wire comes out of the cable header away from the board, as shown in Figure 3-3.
2. Insert the M3001 EBus Interface/Port ALU Module in the rightmost slot of RH20 position number 5 (slot 19, looking at the backplane from the module side). The arrow on cable should be aligned with the arrow on the board connector.
3. Connect the MBus cable to the M3002 Port Microprocessor Module as shown in Figure 3-3.
4. Insert the Module M3002 in slot 20 to the left of the installed M3001 as shown in Figure 3-3.
5. Connect the MBus cable to the M3003 module as shown in Figure 3-3.
6. Install the M3003 CBUS/PLI Interface Module in slot 21 which is located to the left of the installed M3002.

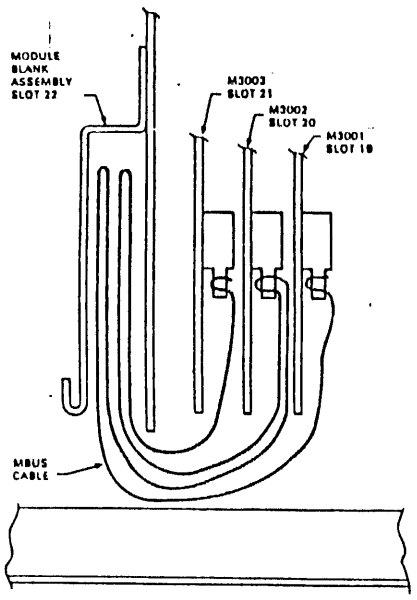

Figure 3-3. MBus Cable Interboard Connection, Top View

7. Install the Module Blank Assembly, DEC part Number 7019266-00. In RH20 position 4, slot 22. This assembly blocks slots 22, 23, and 24. It prevents modules from being inserted into RH20 position 4 and provides a baffle for system cabinet airflow.

8. Perform an ohmmeter check between PT17U and ground to verify that there are no shorts to ground.

9. Fold the MBus cable into the Module Blank Assembly as shown in Figure 3-3.

10. Close the module door.

11. Attach the self-sticking Module Utilization Decal, DEC part number 3622344-02, on the upper rear Baffle Panel.

12. Power Up the KL10.

13. Readjust the existing +5 volt power supply to 5.0 +/- 0.25 V. This adjustment is located on H7420 number 1 in H744 number 4. The location of this regulator is the second slot over from the circuit breaker. The voltage is monitored at +5F, between PT17U and ground.

14. Typer MR (CR) with KLDCP loaded and running, then type FX1 (CR) in response to the command prompt, as shown below:

```
> MR  (CR)
> FX1 (CR)
```

15. Deskew the port modules using a Tektronix 475 (or equivalent 100 MHz minimum) oscilloscope by performing the following steps (see Figure 3-4):

16. Connect channel 1 of the oscilloscope to MRT MBOX CLK H, 4033P1, on the CPU backplane. Use a ground Clip.

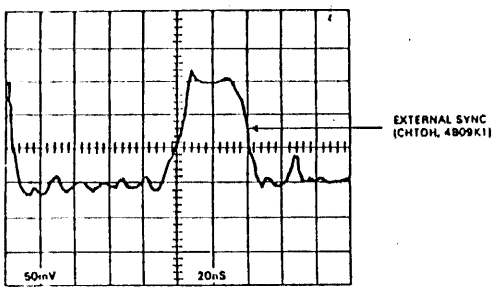

Figure 3-4A. External Sync (CHTO-H)

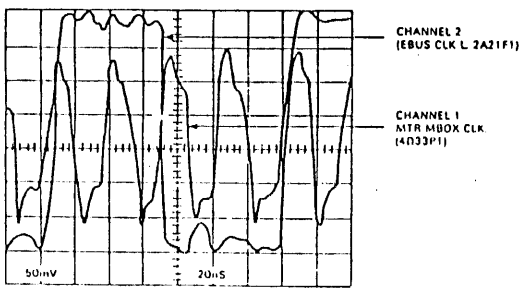

Figure 3-4B. EBUS CLK L and MTR MBOX CLK

Figure 3-4 NIA20 Deskew Timing

4.4 Power Supply Regulator Installation.

Three H7420 power supplies are located on the I/O Cabinet side wall as shown in Figure 3-1. The H7440 regulator to be added is installed in the upper H7420 power supply location. This additional +5 volt regulator is required to support the NIA20 card cage and is installed as follows (see Figure 3-5):

1. Remove the spare slot filler panel from slot 5 of the H7420 number 1 power supply. Save all existing hardware.

2. Take the new H7440 regulator from the kit and install the H7440 in slot 5 of H7420 number 1, using two screws on top and one thumb screw at the bottom. Note that some systems may use H744 or H7440 regulators.

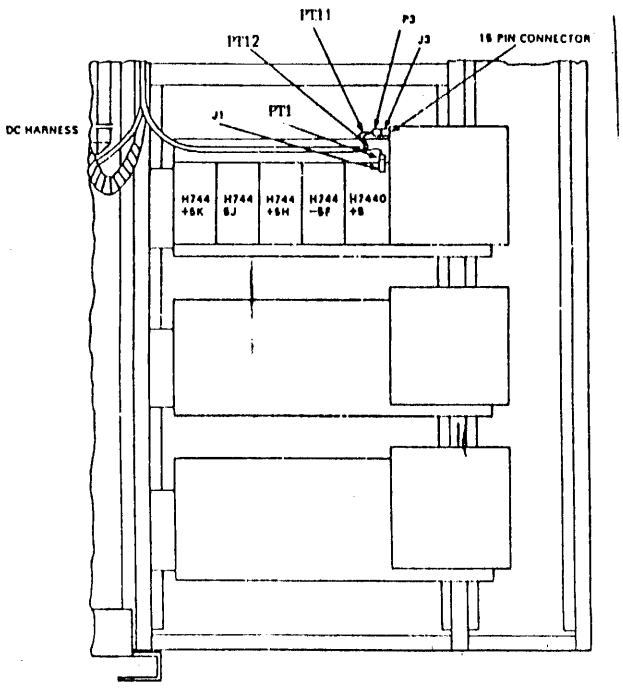

Figure 3-5. H7420 Power Supply

17. Set the time base to 20 ns.

18. Set channel 1 vertical gain to 0.5 V/division. Set the ground reference to 1.3 volts above the horizontal center level of the oscilloscope. (MTR MBOX CLK H is an ECL signal.)

19. Set the oscilloscope sync to positive external.

20. Connect external sync input to CHTO H, 4B09K1 on the CPU backplane. Use a ground clip.

21. Connect channel 2 to CDS1, EBUS CLK L, 2A21F1 on the I/O backplane. Set the channel 2 vertical gain to 0.5 V/division. Use a ground clip. To measure TTL voltages, set the ground reference to 1.5 volts below the horizontal center line of the oscilloscope.

22. Press the Trigger View Switch of the oscilloscope and display the external sync. Adjust the display, so that the rising edge of the external sync aligns with the vertical center line of the oscilloscope.

23. Display MBOX CLK H, channel 1. Identify the rising edge of MBOX CLK H that occurs prior to the vertical center line of the oscilloscope. Display channel 1 and channel 2.

24. Put the KL10-E in the override fault state. Remove the I/O rear door to access the I/O backplane.

25. Locate the 3rd from bottom potentiometer on the clock module (M8559) in slot 12 of the I/O backplane. Using this potentiometer, adjust the FALLING edge of channel 2, EBUS CLK L so that it crosses the RISING edge of MBOX CLK H. This crossing occurs on the horizontal center line of the oscilloscope.

26. Disconnect all probes.

27. Mount the KLAD pack on the front end RP06.

28. Load and run diagnostic DFPTA to verify proper functioning of the port modules. If the modules fail, troubleshoot as directed by the diagnostic. If the modules are functioning properly, continue with the installation.

4.5 Installation Of NIA20 Card Cage/Internal Cable

NOTES

1. When a CI20 is installed, the NIA20 is mounted as shown in Figure 3-1.

2. In the event the CPU Cabinet side panel cannot be removed, the installation of the Current Limiter (refer to subsection 3.4.5.1) should be performed before installing the card cage to avoid making the location inaccessible.

To install the NIA20 card cage shown in Figure 3-6 and the internal NIA20 cable, perform the following instructions:

1. Install the two NIA20 mounting brackets shown in Figure 3-7 as follows:

   a) Remove and reposition any tie-wrapped cables from the right-side frame member of the CPU Cabinet (as viewed from the front) to accommodate the NIA20 mounting brackets and card cage.

   b) Install a total of 8 U-Nuts (Tinnerman nuts), DEC part number 9007786-00, on the right-side frame members of the CPU cabinet (viewed from the front) in preparation for NIA20 card cage and Current Limiter installation. Insert the Tinnerman nuts into frame holes 5, 11, 15 and 52 on each vertical side frame member counting up from the bottom of the cabinet (see Figure 3-7). Four Tinnerman nuts are inserted into each vertical side frame member.

   c) Use four 10/32 one-half inch Phillips panhead machine screws, DEC part number 9006073-01 and four No. 10 star lock washers, DEC part number 9007651-00 on each vertical side of the frame.

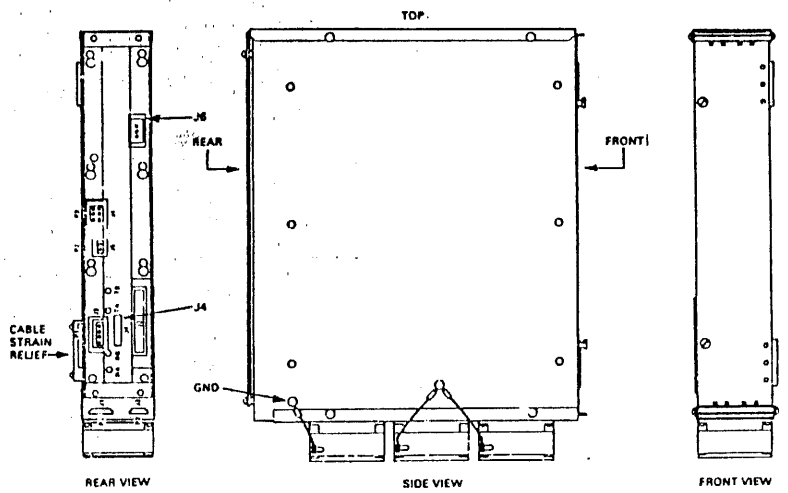

Figure 3-6. NIA20 Card Cage Views

2. Locate the NIA20 internal cable strain relief (white) on the rear left-side of NIA20 card cage (see Figure 3-6). Because of the inaccessible location of this strain relief once the card cage is mounted, the internal cable is routed through it before installing the card cage.

3. Locate the three-foot internal NIA20 cable, DEC part number 7019893-2L.

4. Prepare the internal NIA20 cable for installation by positioning a stick mount on the right-side frame member of the CPU Cabinet (viewed from the front), above the reserved C120 connectors on the Bracket Interface (see Figure 3-9).

5. Route the three-foot internal NIA20 cable through the white plastic strain relief on the NIA20 card cage. Allow enough slack to connect the internal cable to the NIA20 card cage backplane and tighten the strain relief.

6. Connect the internal NIA20 cable to the J4 connector (see Figure 3-6) on the rear of the NIA20 card cage and route the cable as shown in Figure 3-1. The cable connector engages a detent when properly seated.

7. Mount the NIA20 card cage on the two NIA20 mounting brackets (see Figure 3-7), using a total of four 10/32 screws, external lockwashers, and flat washers in frame holes 15 and 52. Hang the NIA20 card cage on the top two screws, then install the bottom two screws.

8. Install the NIA20 card cage ground cable (see Figure 3-6) as follows:

   a) Install a Tinnerman nut in hole 11 of the left side frame member in the CPU cabinet (viewed from the rear).

   b) Connect the ground cable on the left-side frame member (viewed from the rear) by inserting a screw and using a starwasher on each side of the ground cable.

   c) Attach a ground label, DEC part number 3613272-00, closest to hole 1.

9. Run the internal NIA20 cable to the previously positioned stick mount and insert its other end into the rear J1 connector of the NIA20 Current Limiter.

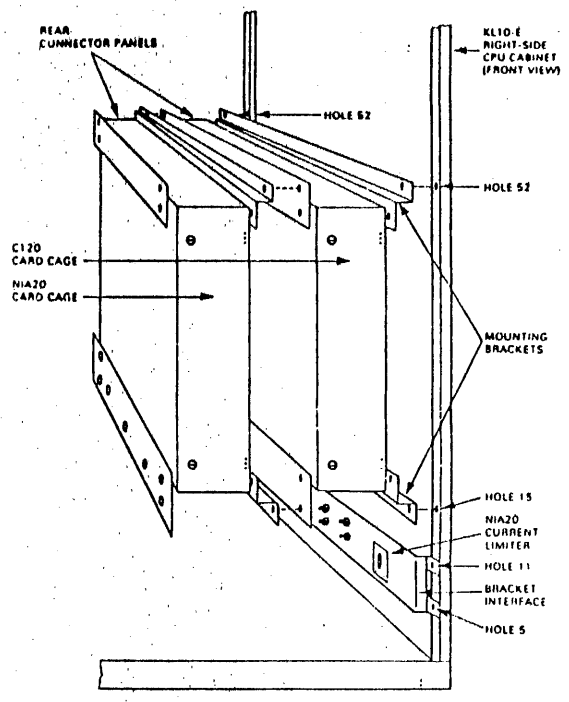

Figure 3-7. NIA-20 Card Cage In KL10-E

4.5.1 Installation Of NIA20 Current Limiter - The NIA20 Current Limiter, DEC part number 5415695-01 is pre-installed on the Bracket Interface, DEC part number 7428312-01, as shown in Figure 3-8. The Bracket Interface, NIA20 internal cable, and BNE3 external cable are installed at the site as follows:

1. Locate the Bracket Interface which is to be located on the lower right-side frame holes 5 and 11 of the CPU Cabinet (viewed from the front). Four 10-32 screws, external lockwashers, and flat washers are used to install the Bracket Interface.

2. Connect the internal cable to the rear J1 connector and also connect the BNE3 external (Ethernet Transceiver) cable to the front P1 connector located on the NIA20 Current Limiter (see Figure 3-8).

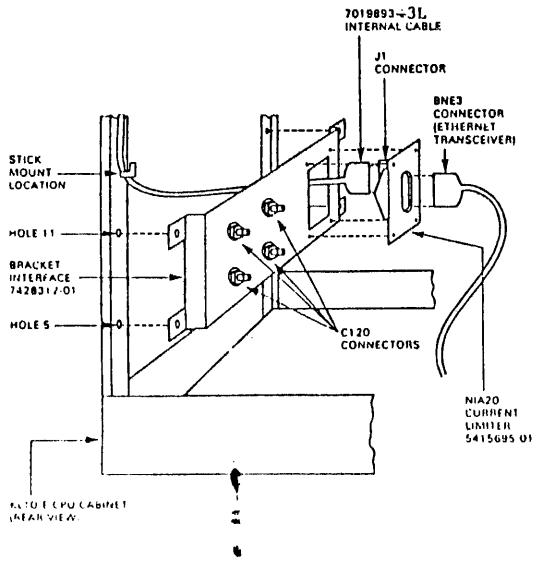

Figure 3-8. NIA20 Current Limiter

4.5.2 Harness Installation - The following list of harnesses to be installed are:

1. DC power harness (2 sections)
2. vane switch cable
3. DC voltage monitor cables
4. fan ac cable and power cord
5. PLI bus
6. External BNE3 NIA20 cable

Figure 3-9 shows a diagram of the harness and cable interconnections. The above harnesses are installed as follows:

1. Install tie wraps approximately eight inches apart on all harnesses. When routing cables close to internal assemblies, use spiral wire wrap to protect the cables from edges.

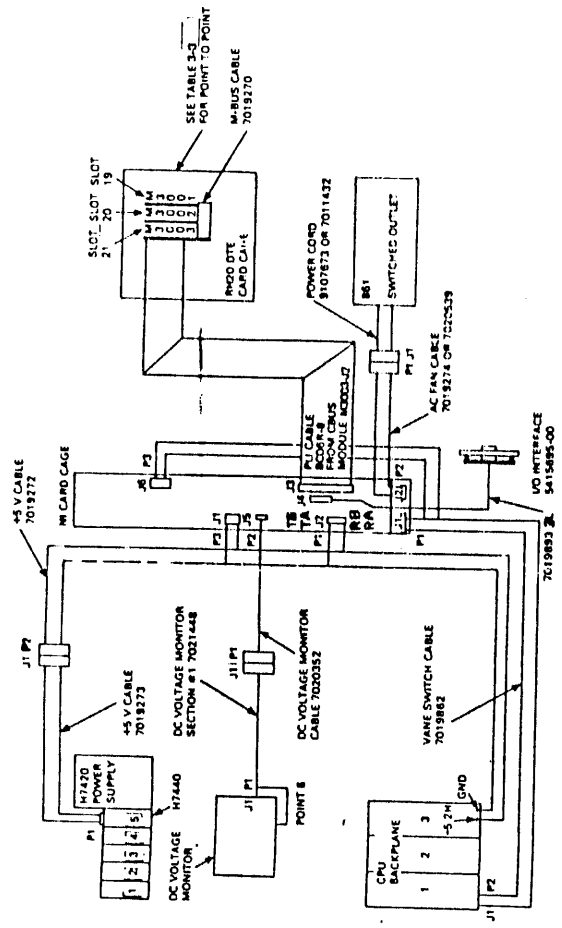

Figure 3-9. NIA20 Harness And Cable Interconnection Diagram

2. Locate the DC power harness, DEC part numbers 7019272-00 and 7019273-00 (see Figure 3-10), and its black and blue wires labeled PT5 and PT6. Connect the black wire to -5.2 ground and the blue wire to -5.2V in the CPU Cabinet (see Figure 3-2).

3. Locate and connect P1 of the DC power cable, DEC part number 7019272-00, into connector J1 of the NIA20 card cage backplane (see Figure 3-6). Next, connect P3 of of DC power cable into J2 of the NIA20 card cage.

4. Connect P2 of the 7019272-00 DC power cable to J1 of the 7019273-00 DC power cable.

5. Tie wrap the new harness to existing KL I/O power harnesses and route this cable as shown in Figure 3-1. Use spiral wrap along the harness where it contacts the side of the CPU frame member nearest the H7420 power supplies.

6. Locate the red and white wires labeled PT11 and PT12 of DC power cable (see Figure 3-10). Disconnect P3 atop power supply H7420 number 1, then connect PT7 and PT8 to pins 3 and 4, respectively, on P3 of the H7420. Then reconnect P3 to the H7420.

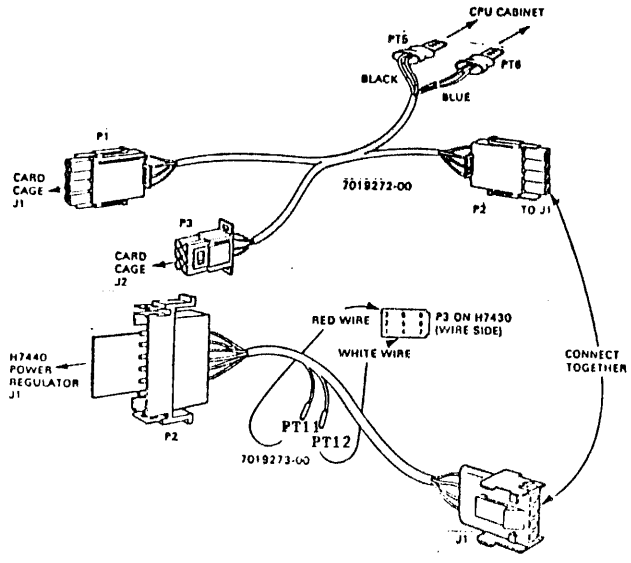

Figure 3-10. DC Power Cable

7. Connect P1 of the 7019273-00 DC power cable to connector J1 of the previously installed H7440 regulator (see Figure 3-5).

8. Locate the vane switch cable, DEC part number 7019862-00, (see Figure 3-11). Connect P1 of the vane switch cable to connector J1 located on the NIA20 card cage (see Figure 3-6). Also, connect P3 of the vane switch cable to connector J6 of the NIA20 card cage. Use stick mounts and spiral wire wrap as needed to route and protect the vane switch cable.

NOTE

When a CI20 is installed (in a combined CI20/NIA20 installation) the short vane switch cable, DEC part number 7020488-00, is used to jumper CI20 vane switch harness to NIA20 card cage. Connector P3 should be removed from the CI20 backplane connector J6 and connected to the NIA20 backplane connector J6 (CI20 backplane connector J6 will be left blank). Consult the CI20 Reference Manual (DEC order number EK-CI20-RM-001) for other applicable CI20 installation procedures.

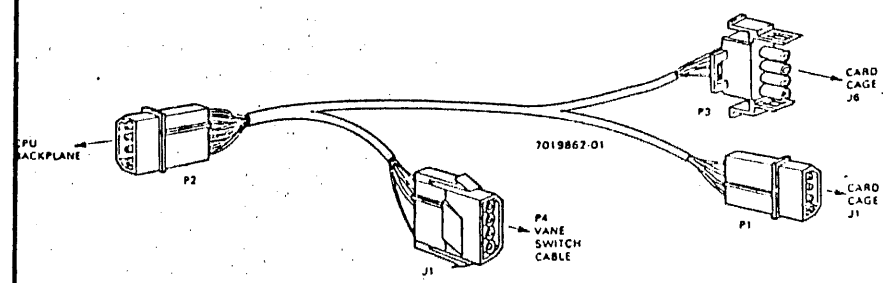

Figure 3-11. Vane Switch Cable

9. Remove the original KL CPU vane switch cable (P4) and connect this to the NIA20 vane switch cable connector J1.

10. Connect P2 of the vane switch cable to the original KL CPU vane switch assembly (see Figures 3-1 and 3-12).

11. Overlay the CPU/NIA20 air flow fault decal over the existing CPU air fault message decal on the 863 Fault Switch.

12. Locate the DC voltage monitor cable, DEC part number 7020352-00 (see Figure 3-13). Connect P2 of the DC voltage monitor cable to J5 on the NIA20 card cage and connect the other cable end (P1) into connector J1 on the new DC voltage monitor board.

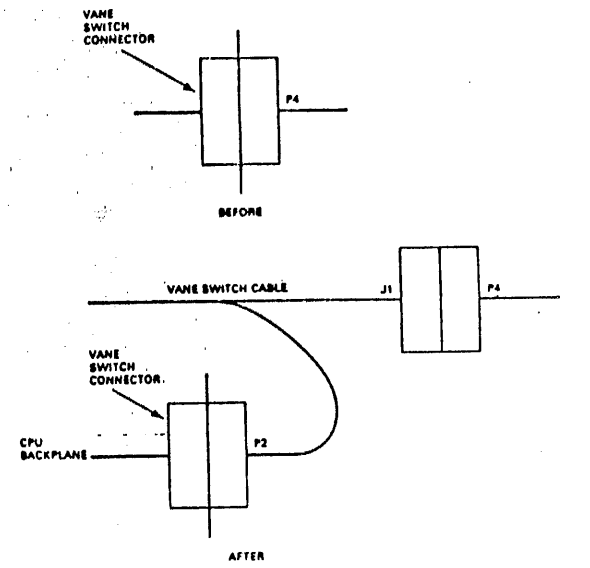
13. Locate the switches on the DC voltage monitor board, DEC part number 5414506-01. Only Switch S1 should be ON, while all other DC voltage monitor board switches should be OFF.

14. Insert the DC voltage monitor board into the +5 volt slot of the DC voltage monitor card cage.

15. Attach the monitor panel decal, DEC part number 3621501-02, to indicate the slot used for the NIA20 DC voltage monitor board.

16. Connect the remaining single orange wire of the DC voltage monitor cable to a location adjacent to the existing orange wire on the DC voltage monitor board zone +5L.

17. Tie wrap the DC voltage monitor and vane switch harnesses to the DC power cable. Use adhesive-backed square cable mounts to support the harness.



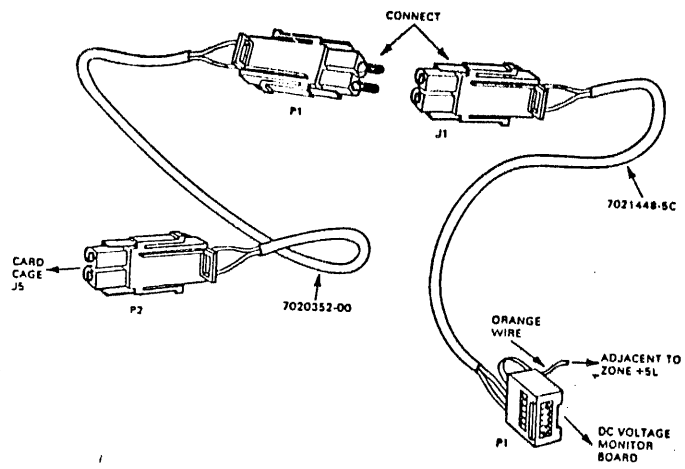


Figure 3-13. DC Voltage Monitor Cable

18. Locate the fan ac cable, DEC part number 7019274-06 (120 Vac 60 Hz) or 7020539-06 (240 Vac 50 Hz), and the power cord, DEC part number 9107673-06 (120 Vac 60 Hz) or 7011432-02 (240 Vac 50 Hz), (see Figure 3-14). Connect the fan ac cable connector P2 to connector J2 on the NIA20 card cage and then join the fan ac cable to the power cord. Insert the other end of the power cord into any available switched outlet of the 861 power controller. Connect the ground wire to the adjacent side ground screw on the NIA20 card cage. Use a star washer to ensure a good electrical connection.

19. Install a Tinnerman nut in hole 11 on the frame and attach the ground cable from the NIA20 card cage to the frame. Use two star washers to ensure a good electrical connection.

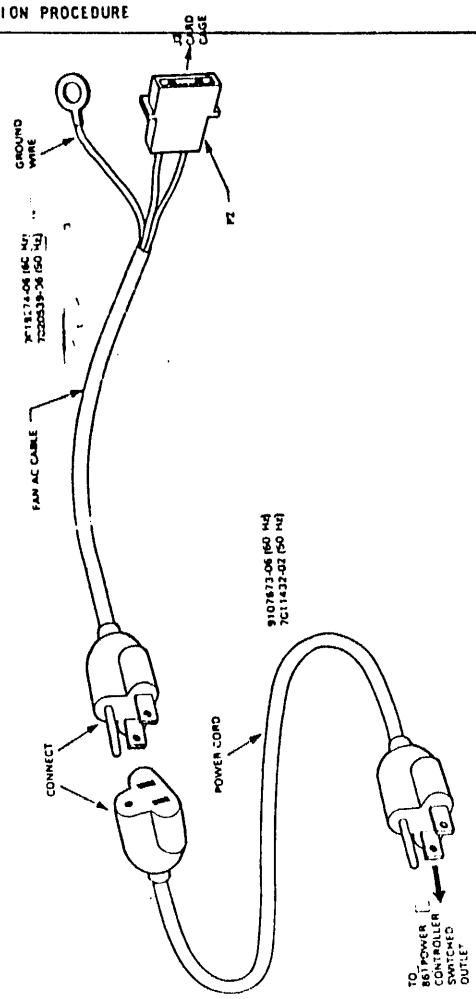

Figure 3-14. Fan AC Cable And Power Cord

20. Locate Cable Support panel, DEC part number 7428311-00 (see Figure 3-1). Install the smooth side of panel (used to support the cable harnesses) toward the rear when facing the CPU cabinet. Use four of each: Tinnerman nuts, screws, flat washers, and lock washers in holes 36 and 39.

21. Locate the PLI cable, DEC part number BC06R-08 (see Figure 3-1 for cable route and Figure 3-9 for cable connection). Connect one end of the PLI cable (identified by a red line imprinted on top of the cable) to module M3003 and route through the cable strain relief on the NIA20 card cage. The other end of the PLI cable (identified by a red line imprinted on bottom of the cable) to connector J3 on the NIA20 card cage (see Figure 3-6). To secure the PLI cable, install adhesive foam, DEC part number 1213716-00, within each of the 4 flat cable clamps. Install one cable clamp on the side of the CPU card cage and three cable clamps across rear of cable support panel.

22. Route the cables as shown in Figure 3-1.

23. Replace the CPU Cabinet door.

4.6 Installation Of KL10 Adapter Board And Blank Module Assembly

The KL10 to NI Adapter Board, DEC part number L0072-00, and the Blank Module Assembly, DEC part number 7014103-00, are installed in the NIA20 card cage as follows:

1. The KL10 to NI Adapter Board and the Blank Module Assembly are installed into the NIA20 card cage by opening its front hinged-end panel door.

2. Install the KL10 to NI Adapter Board (L0072-00) in the left hand slot.

3. Install the Blank Module Assembly (7014103-00) in the adjacent slot to the right.

4.7 Checkout

The physical part of the installation is complete at this point. All that remains is to verify that the system runs properly in the new configuration. Perform the following steps to verify the installation.

1. Verify that the KL10-E is no longer in the override fault state.

2. Power up the KL10-E.

3. Readjust the 5 volt power supply to 5.0 +/- 0.25 V. This adjustment is located on power supply H7420 number 1, regulator H7440 slot 5 (see Figure 3-5). This regulator is located nearest the H7420 power supply breaker. The voltage is monitored at the black and red wires on connector J1 of the NIA20 card cage (see Figure 3-7).

4. Load and run diagnostic DFPTA for a least 5 passes in Exec mode.

   NOTE: Certain configurations may require the use of an H4080 Ethernet Loopback Connector in place of existing Ethernet Transceiver.

5. Load and run diagnostic DFNIE for at least 5 passes in Exec mode.

6. Load and run diagnostic DFNIA for at least 5 passes in Exec mode.

7. Enable the operating system

8. Run diagnostics DFPTA in user mode for at least 5 passes.

9. Run diagnostics UETP NIA20 Test in user mode for at least 4 hours.

10. Disable the operating system.

11. Remove all Field Service packs and tapes from the customers system and store in a secure area.

12. Transfer/Sign-off system to customer's authorized representative.

DEC 16-(392)-1079-N971
DRA 107

SHEET 1 of 5

ENGINEERING SPECIFICATION — CONTINUATION SHEET

TITLE VOLTAGE MONITOR

1.0 General

1.1 This is a specification for a voltage monitor printed circuit board.

When the input voltage to the module is within its range and the correct switch is placed in the "on" position, a green LED is illuminated.

When the voltage goes out of range either on an overvoltage or undervoltage condition, the green LED is extinguished and this fault is latched.

1.2 Reference Documents

DEC STD 102 - Environmental Standard.
D-UA-5414506-1-0 Voltage Monitor Board

2.0 Electrical Specifications

2.1 Input Voltages

The following voltage input ranges are acceptable for monitoring:

+5V	0- +7V DC
+15V	0- +20V DC
+20V	0- +25V DC
-5V	0- -7V DC
-15V	0- -20V DC
-20V	0- -25V DC

2.2 Power Source

This module will operate from a power source of-4.5Vto -40V DC, or +4.5V to +40V DC.

2.3 Detection Band

This module will detect and extinguish the green LED display when the input voltage is out of the following bands:

	SIZE	CODE	NUMBER	REV
	A	SP	5414506-1-2	A

DEC FORM NO EN-01022-16-N370-(381)
DRA 108

SHEET 2 OF 5

ENGINEERING SPECIFICATION — CONTINUATION SHEET

TITLE VOLTAGE MONITOR

Switch	Voltage	Error Band (Fault when outside this range)
SW1 1	+/-5V	$\pm 5\%$ $\pm 1.5\%$ (3.5% to 6.5%)
SW1 2	+/-15V	$\pm 5\%$ $\pm 1.5\%$ (3.5% to 6.5%)
SW1 3	+/-20V	$\pm 5\%$ $\pm 1.5\%$ (3.5% to 6.5%)

2.4 Reset

Reset pads are provided on the printed circuit board for local reset. Jumper reset pads together to reset the indicator. Reset is also provided by removal of all power to the module. Reset jumper must be less than 100 ohms resistance.

2.5 Turn-on Time Delay

An undervoltage fault will be disabled for $100^{\pm 30}_{ms}$ ms after the power source voltage is truned on.

2.6 Fault Duration

The over and/or under voltage condition must exist for a duration of time before detection.

Overvoltage Condition - 0.1_{ms}
Undervoltage Condition - 0.2_{ms}

2.7 Operating Power

Current drain is 16 ma during normal operation. Current drain during a fault condition is 22 ma.

2.8 Operating Voltage

Module will operate as long as power source voltage is greater than 4.5V. Duration of true indication may be lengthened by connecting power source voltage to a voltage higher than being monitored.

If the module is operated from the voltage it is monitoring, it will not indicate (at all) upon loss of the voltage.

3.0 Output

3.1 Indicator

Normal operation of the voltage is indicated by an illuminated green LED. Abnormal voltage is indicated by the lack of illumination by the green LED.

DEC FORM NO EN-01022-16-N370-(381)
DRA 108

SHEET 3 OF 5

ENGINEERING SPECIFICATION — CONTINUATION SHEET

TITLE VOLTAGE MONITOR

4.0 Mechanical and Physical

4.1 Size - Printed circuit board 2.0 x 3.0 in. Maximum height is 0.5 in.

4.2 Weight

4.3 Mounting - Any position

4.4 Cooling - Natural convection.
Power may range from 100 mw to 650 mw depending upon power source voltage.

4.5 Temperature Range

- Per DEC Std 102 for Class B environment

4.6 Altitude - 8000 ft - operate

4.7 Vibration - Per DEC Std 102 Class B

4.8 Mechanical Shock - Per DEC Std 102

5.0 Reliability

MTBF goal is greater than 200,000 hours for ground benign environment per MIL - HDBK 217B based on parts count.

6.0 Safety

Not applicable

7.0 Input-Output Connector

TABLE OF CONTENTS/REVISION STATUS

1 GENERAL

The NI Current Limiter provides a limit to the output current available from the protected port. The circuit will limit the output current to 600 milliamperes, maximum.

No fuse protection is required because the circuit is designed to be current-limiting.

1.1 REFERENCED DOCUMENTS

EL-00030-00	DEC STD 030 Module Manufacturing Standard
EL-00102-00	DEC STD 102 Environmental Standard For Computers and Peripherals
EL-00119-00	DEC STD 119 Digital Product Safety
EL-00186-00	DEC STD 186 Signal Integrity

2 ELECTRICAL SPECIFICATIONS

2.1 POWER SOURCE

The circuit will operate from a 15 V, 2 ampere dc power source.

2.2 INPUT VOLTAGE

+15 (± 2%) Vdc, ripple and noise 5% maximum

2.3 OUTPUT VOLTAGE

+15.3 to +11.4 Vdc, ripple and noise 5% maximum

2.4 OUTPUT CURRENT

500 milliamperes, maximum

2.5 EXTERNAL PROTECTION

Because the short circuit current will be limited to 600 milliamperes, maximum, and the components will not exceed safe temperatures under operating or overload conditions, the current limiter requires no external protection.

2.6 CONNECTIONS

2.6.1 Input J1 20-Pin Connector Berg Type

Pin	Function	Pin	Function
1	NC	11	NC

6	RECEIVE -	16	TRANSMIT +
7	NC	17	POWER RTN
8	NC	18	TRANSMIT -
9	DETECT H	19	NC
10	CLSN DET H	20	NC

2.6.2 Output J2 15-Pin Connector D Shell (Type RS-232)

Pin	Function	Pin	Function
1	SHIELD	8	NC
2	CLSN DET H	9	CLSN DET L
3	TRANSMIT +	10	TRANSMIT -
4	NC	11	NC
5	RECEIVE +	12	RECEIVE -
6	POWER RTN	13	POWER +12
7	NC	14	NC
		15	NC

2.6.3 Internally Commoned

All signals with same name
Pin 14 J1 to Pin 17 J1 to Pin 6 J2 (Power RTN Layer)
Pin 9 J1 to Pin 13 J2
Pin 1 J1 to Pin 1 J2 to Mounting Panel (GND Layer)

3 MECHANICAL SPECIFICATIONS

3.1 SIZE

Printed circuit board mounted on panel 4.2 x 3.1 inches.

3.2 MOUNTING

The panel will be mounted by four 6-32 inserts, one in each corner. Mounting dimensions are approximately 2.35 x 3.55 in. for mounting on 74-28312 interface bracket.

3.3 CONNECTIONS

The circuit will be connected to the power source and I/O bulkhead via J1, 20-pin, Berg type header connector. The output will be connected to J2, 15-pin D Shell connector (Type RS-232).

3.4 WEIGHT

6.6 ounce typical.

3.5 COOLING

a. Natural convection.
b. Total dissipation during normal operation - 2 watts typical.
c. Total dissipation during short circuit condition - 9.5 watts maximum.

3.6 TEMPERATURE RANGE

+10°C to +50°C (+50°F to +122°F) per DEC STD 102 for Class B environment as cooled by internal cabinet air.

3.7 ALTITUDE

8000 feet operate with maximum allowable temperature reduced by 1°F for each 1000 feet elevation.

3.8 VIBRATION

Sinusoidal vibration:

5-22 HZ	0.010 inch DA
22-500 HZ	0.25 GPK
500-22 HZ	0.25 GPK
22-5 HZ	0.010 inch DA

Sweep rate 1 octave/min. Per DEC STD 102 Class B.

3.9 MECHANICAL SHOCK

40 GPK Per DEC STD 102 Class B.

4 RELIABILITY

4.1 MBTF

Greater than 1,000,000 hour for ground fixed environment per MIL-HDBK-217D.

5 SAFETY

The PC board will be Type 1 material.
