HPR STOPS.

1. Determine the type of HPR by reading bit positions. 100 thru 115 in the upper scale of ledgend #7 on the display 1 maintenence panel.

2. If the HPR Stop Code explanation requires a SYSDUMP.

   a. Press 'SYSTEM RESET' and 'RUN' to write SYSDUMP to disk, wait for HPR 9999.

   b. Reload the same Supervisor by using IPL. Specify 'D' rather than N,A,C,L or H for the Spool recovery option. Specify the same spool volumes that were used before.

   c. When the listing on the printer of the Spool directories. is completed. the following message is displayed.
   SPL DEBUG: ENTER SPL DEBUG CMD?

   d. Reply with 'HALT' which results in the following message.
   ENTER SPOOL FILES RECOVERY OPTION (A,C,L,H,N).

   e. Reply A,C,L,H or N as you normally would at IPL time.

   f. When the System is ready, run SYSDUMP or SYSDUMP0 to print the dump obtained in step a.
