TECHNICAL REFERENCE NOTICE OF DISCLAIMER

This Technical Reference is published by Bell Communications Research, Inc. (Bellcore) to inform the industry of Bellcore's view of the Signalling System Number 7 protocol for *Bell Communications Research Specification of Signalling System Number 7*.

Bellcore reserves the right to revise this document for any reason, including but not limited to, conformity with standards promulgated by various agencies, utilization of advances in the state of the technical arts, or the reflection of changes in the design of any equipment, techniques, or procedures described or referred to herein. BELLCORE MAKES NO REPRESENTATION OR WARRANTY, EXPRESSED OR IMPLIED, WITH RESPECT TO THE SUFFICIENCY, ACCURACY, OR UTILITY OF ANY INFORMATION OR OPINION CONTAINED HEREIN. BELLCORE EXPRESSLY ADVISES THAT ANY USE OF OR RELIANCE UPON SAID INFORMATION OR OPINION IS AT THE RISK OF THE USER AND THAT BELLCORE SHALL NOT BE LIABLE FOR ANY DAMAGE OR INJURY INCURRED BY ANY PERSON ARISING OUT OF THE SUFFICIENCY, ACCURACY, OR UTILITY OF ANY INFORMATION OR OPINION CONTAINED HEREIN.

This document is not to be construed as a suggestion to any manufacturer to modify or change any of its products, nor does this document represent any commitment by Bellcore or by any Bell Operating Company (BOC)* or regional affiliate thereof to purchase any product whether or not it provides the described characteristics.

Readers are specifically advised that each BOC or regional affiliate thereof may have requirements or specifications different from the specifications of *Signalling System Number 7* described herein. Therefore, any vendors or manufacturers of products should communicate directly with a BOC or regional affiliate thereof to ascertain that company's needs, specifications, and actual requirements.

Nothing contained herein shall be construed as conferring by implication, estoppel or otherwise, any license or right under any patent, whether or not the use of any information herein necessarily employs an invention of any existing or later issued patent.

Bellcore does not recommend products, and nothing contained herein is intended as recommendation of any product to anyone.

If further information regarding technical content is required, please contact:

District Manager, ISDN Architecture Planning

GENERAL CONTENTS

Volume 2

	Page
FOREWORD	
INTEGRATED SERVICES DIGITAL NETWORK (ISDN) USER PART	
RECOMMENDATION Q.761: FUNCTIONAL DESCRIPTION OF THE INTEGRATED SERVICES DIGITAL NETWORK (ISDN) USER PART	
1. General	1
2. Services Supported by the ISDN User Part	1
3. End-to-End Signalling	2
RECOMMENDATION Q.762: GENERAL FUNCTION OF MESSAGES AND SIGNALS	
1. Signalling Messages	1
2. Signalling Information	5
RECOMMENDATION Q.763: FORMATS AND CODES	
1. General	1
2. Parameter Formats and Codes	5
3. ISDN User Part Parameters	7
4. ISDN User Part Messages and Codes	33
RECOMMENDATION Q.764: SIGNALLING PROCEDURES	
1. General	1
2. Basic Call Control and Signalling Procedures	2
3. End-to-End Signalling	39
ANNEX A: Examples of the set up of an SCCP connection by the ISDN User Part	46
ANNEX B: Contents of Interface Elements	53
4. User Facilities	54
ANNEX C: Examples of State Transition Diagrams for the CCBS procedure	76
APPENDIX I: Continuity Check Procedures (Adopted from TUP)	83
1. Continuity Check for 4-Wire Speech Circuits	83
2. Continuity Check for 2-Wire Speech Circuits	87
APPENDIX II: Functional Block Diagram and Signalling Procedure Control	89
1. State Transition Diagram Organization	89
2. Functional Block Diagram and SDL Abbreviations	89
APPENDIX III: Call Processing State Transition Diagrams	95
1. Introduction	95
2. SDL Diagram Organization	95
3. CPC SDL States, Abbreviations and Timers	96
APPENDIX IV: Circuit and Circuit Group Maintenance Requirements	145
1. Test Calls	145

GENERAL CONTENTS

Volume 2

2. Software Carrier Group Alarm.....	145
3. Hardware Carrier Group Alarm.....	146
4. Maintenance Processing Control State Transition Diagrams	146
RECOMMENDATION Q.766: PERFORMANCE OBJECTIVES IN THE ISDN APPLICATION	
1. Introduction.....	1
2. Signalling Availability	1
3. Signalling Dependability	1
4. Signalling Delay.....	2
5. Signalling Systems Limitations.....	3
TRANSACTION CAPABILITIES APPLICATION PART (TCAP)	
RECOMMENDATION Q.771: FUNCTIONAL DESCRIPTION OF TRANSACTION CAPABILITIES	
1. Introduction.....	1
2. Purpose and Scope.....	1
3. Architectural Concepts and Terminology.....	2
4. Overview of TC Functions and Procedures.....	4
5. Layer Service Characteristics	8
6. Structure of Recommendations.....	9
RECOMMENDATION Q.772: DEFINITION AND FUNCTIONS OF TRANSACTION CAPABILITY MESSAGES	
1. General.....	1
2. Introduction.....	1
3. Transaction Portion	1
4. Component Portion.....	2
5. Parameters.....	5
RECOMMENDATION Q.773: TC FORMATS AND CODES	
1. Introduction.....	1
2. Data Element Encoding.....	1
3. Transaction Portion	5
4. Component	8
5. Parameters.....	13
6. Summary of Identifiers.....	20
RECOMMENDATION Q.774: TRANSACTION CAPABILITIES PROCEDURE	
1. Introduction.....	1
2. Addressing.....	1
3. Normal Procedure.....	1
4. Special Procedures.....	11
5. Abnormal Procedures	12
6. State Transition Diagrams	16

FOREWORD

"Bell Communications Research Specification of Signalling System No. 7" is intended to be compatible with the "American National Standard Specification of Signalling System No. 7" that is being drafted by the T1X1.1 Working Group on U.S. Standards for Common Channel Signalling. This document uses (as far as possible) the same terminology, annotation rules and technical information as the T1 draft, yet it is being issued ahead of the official ANSI standard because it supplies timely information necessary for Bell Operating Company applications.

An asterisk (*) in the right margin signals a change from the 1984 CCITT protocol for U.S. network use, and a vertical bar in the margin indicates changes in subsequent issues. The following abbreviations are employed throughout:

CCITT SS#7 or SS7 = International Signalling System No. 7, and SS7 = the T1 version of Signalling System No. 7.

This document is largely congruent with SS7 which is, in turn, based on and compatible with the 1984 Red Book specification of SS#7 issued for international use by CCITT Study Group XI (Vol. VI, Fascicle VI.7). The objectives for CCITT SS#7 implementation in U.S. networks exceed basic circuit switched call control signalling and place major emphasis on advanced capability support, such as: Integrated Services Digital Network (ISDN) signalling, Operations Administration and Maintenance (OA&M) applications, Transaction Capabilities, and others yet undefined. National versions of the 1984 Red Book Telephone User Part (TUP) and Data User Part (DUP) are not included and will not be supported, rather, descriptions of additional protocol capabilities and new applications are provided. Subsequent information on new applications will appear as detailed definition proceeds within CCITT and the ECSA T1 body.

The CCITT document has been modified by the T1X1.1 Working Group for use within and between U.S. networks to meet the anticipated needs and applications of those entities. These modifications - which coincide with current and projected CCITT activity — assume two general categories: (1) the specification of options designated by the CCITT for national use; and (2) addenda to the 1984 protocol providing for new applications of the SS#7 protocol. Although the T1 specification is a U.S. standard published by ANSI, several Canadian entities participate in the Working Group to ensure compatibility with American standards.

Volume 1 of this issue covers the Transport parts of SS7, including the Message Transfer Part (MTP) and the connectionless features of the Signalling Connection Control Part (SCCP). Volume 2 covers the Application parts of SS7, including the ISDN User Part, and the Transaction Capabilities Application Part.

The contents of this document correspond to the Red Book specification and, when appropriate, use the same Q numbers and chapter titles. The following appear in the same order as the Red Book:

- Q701-Q708, MTP;
- Q711-Q714, SCCP (to provide an OSI network layer over the MTP);
- Q761-Q766, for ISDN call control; and
- Q791-Q795, for OA&M capability.

Chapters Q7T1 - Q7T4 supplement the Red Book and provide transaction capabilities that specify OSI compatible layers for appropriate applications (a subject for further study in CCITT). The Glossary and Abbreviations amend those in the Red Book, and the Annotation section details the rules used to indicate diversions from the Red Book.

Future additions to this document - e.g., protocol evolution, new applications and operational requirements - will be considered by Bell Communications Research based on the interests of the Bell Operating Companies, and based on the work of the ANSI T1 Committee, which will promote compatibility among U.S. networks. Such additions will be incorporated with due attention to CCITT layered model principles, conventions and boundaries.
